Summary

I've spent 20+ years shipping production software. I build secure, provider-agnostic LLM and agent platforms and push them past the pilot into something a team can run. My leadership and teaching come from that work. For nearly a decade I've designed curriculum, run workshops and hackathons, and coached developers on getting AI work into production, across 500+ technical sessions and 10+ hackathons. I've been a founder or CTO at four startups.

Core Expertise

- **AI systems:** LLMs, RAG, multi-agent workflows, MCP, tool use, memory, model routing, evaluations, observability, guardrails, LLMOps
- **Platforms & security:** Docker, Kubernetes, CI/CD, infrastructure as code, Ansible, deployment verification, secrets management, egress controls, network isolation, cost controls
- **Languages & data:** Go, Python, TypeScript, JavaScript, C#, SQL, React, Node.js, Django, REST APIs, PostgreSQL, MongoDB, Redis, DuckDB
- **Leadership & enablement:** curriculum design, technical instruction, workshops, hackathons, live coding, architecture walkthroughs, mentoring, code review, AI strategy, product roadmaps, responsible AI, investor and customer discussions

Professional Experience

Muse & Machine · Founder / Principal Applied AI Engineer — Remote · Jan 2023 to Present

- Shipped a one-command bootstrap for hardened AI-agent deploys and a 16-role Ansible suite for OpenClaw and CapRover. The stack covers Anthropic API support, LiteLLM model routing, monitoring, backups, and verification.
- I use this to run my own AI-agent fleet and to set it up for clients, owning provisioning through monitoring, backups, and verification.
- Put nine hardening layers and three segmented Docker networks in place, including Smokescreen allowlisted egress, file-based secrets, and automated runtime checks for allowed and blocked traffic.
- Built CI around eight Molecule scenarios, lint, syntax checks, and secret scanning to catch configuration errors before release. Separate live smoke tests cover every configured LLM model.

Dominican University of California · Professor of Applied Computer Science — San Rafael, CA · Aug 2021 to Present

- Designed the 16-course applied CS program and lead its AI engineering track. The program also covers data structures, web security, DevOps, software engineering, and production architecture.
- Wrote and taught a 2026 AI engineering course. Students worked with Claude Code, Codex, MCP, RAG, agent workflows, verification loops, durable repo context, and production code review.
- Built AI code review pipelines for 200+ submissions a week, which cut evaluation turnaround 80% and course development time 50%.
- Coached 60+ engineers across 5 courses and twice-yearly hackathons. They went from a first AI workflow to prototypes, deploy workflows, and public demos. Hackathon teams shipped a deployed MVP within one event cycle.
- Teach 4+ courses a semester in AI engineering, Go, DevOps, web security, data structures, and JavaScript. Class sizes range from 10 to 60 students. Labs, starters, CI, and automated evals live on GitHub.

Make School · Instructor, Full-Stack Web — San Francisco, CA · Aug 2018 to Jul 2021

- Ran 6+ courses a semester at YC-backed Make School in Python, Node.js, APIs, and databases for developers and founders shipping under production constraints.
- Coached 250+ junior engineers through debugging, portfolios, technical interviews, and production deploys.
- Wrote 12+ enablement modules and automated lesson/slide generation, which cut prep time in half.

UC Berkeley Extension • Instructor, Full-Stack Web / Data Science — San Francisco, CA • Jul 2017 to Dec 2018

- Taught full-stack and data viz with repo-backed docs, live demos, clear project specs, debugging sessions, and deployment walkthroughs.
- Ran workshops where 200+ engineers shipped capstones with CLI workflows, GitHub releases, secret management, and production infra.

FrameBuzz • Founder / Inventor / Chief Technology Officer — Austin, TX • Oct 2012 to Dec 2017

- Took FrameBuzz from prototype to production, including the video annotation engine. Led four engineers through releases, platform scaling, and day-to-day ops.
- Co-invented timestamp-anchored conversations and viewer interaction for time-shifted video (U.S. Patent 9,066,064).
- Owned product and eng strategy from concept to launch. That meant investor and customer discussions, demos, and how we talked about the product in public.

Earlier Experience

bitoriented inc. • Founder / Principal Software Engineer — Remote • Nov 2014 to Aug 2018

Custom software across Django, PHP, .NET, iOS, e-commerce, telecom, healthcare, education, and media. Turned vague requirements into scoped production systems. Helped non-technical founders understand what we were building and how to keep it running.

ProAce Technology Services • Senior Systems Engineer — Austin, TX • Apr 2011 to Mar 2013

Shipped 8+ iOS, Django, PHP, and .NET projects for e-commerce, telecom, and healthcare. Owned scope through production launch.

HZDG • Senior Interactive Developer — Remote • Oct 2010 to Jan 2011

Stayed on after HZDG acquired Titrate, mentoring developers and reviewing their code to tighten delivery.

Titrate Solutions • CTO — Austin, TX • Sep 2009 to Dec 2010

Led a three-person team that launched 12+ web, interactive, and mobile products in one year for NFL, IMAX, Brooks Brothers, and other brands.

NiCE • Junior Software Engineer — Midvale, UT • Apr 2008 to Sep 2009

Built call-center features, admin tools, and NOC alerting for next-gen inContact. Led an intern team across eng and design.

Selected Open Source

187 stars across my public repositories.

- **My projects** (https://github.com/stars/droxey/lists/projects): My AI systems, deployment, prompt infrastructure, curriculum, and onboarding work.
- **My courses** (https://github.com/stars/droxey/lists/courses): Open course materials, assignments, CI, and automated evals for applied software engineering at Dominican.

Patents

Co-inventor, U.S. Patent 9,066,064, Conversations on Time-Shifted Content.
https://patents.google.com/patent/US9066064B2/en

Education

Neumont College of Computer Science • B.S. Computer Science — Salt Lake City, UT • 2006 to 2008

Accelerated bachelor's in two years. Charter member, Society of Women Engineers (2007).
